Proposed by Thomas Sunderlin and Red Rock Quarry Associates LLC.

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Dennis Bojdak

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Regina Balzano

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Walter Radziszewski

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Debra Bythewood

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Patricia Torrey

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Gordon Cardinal

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Linu Allen

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Molly Sumner

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Steve Spring

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Julie Gibbs

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Erica Medina

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

frank page

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Sarah Hulser

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Kathy Whitehead

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Kristyn Carlo

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Ryan Schuster

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

David Vomer

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Denise Erlandson

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Lisa Frank

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Patricia Dillon

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Lisa Addison-Wilson

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Kaylee Gadek

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Gloria Shaw

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Amy Vormbrock

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Dianne Spillett

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Toly Leshkevich

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Michael Mahanna

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Donna Romeo

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Matthew Townsend

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Margaret Sherman

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

John Matuella

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Patrick Cuffe

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Anne DeFilipps

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Erica Smith

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Hannah Kane

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? 2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Tory Dunn

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Albert Palentchar

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Rebecca Hoffman

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

David D. Gould

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Lori Eddy

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Thaddeus Randazzo Sr.

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Nicholas Capron

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Rodney Lee

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Cathy Howard

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Celia Allen

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Katie Southfield

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Carolyn Mohr

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Joan Dowd

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Susan Rocco

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Christine Archer

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Michael Gerhardt

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Wendy Daby

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Meghan McCarthy
