4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Andrew Luk

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Stephanie Coleman

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Emily Marcone

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

John Lyon

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Lisa Jackson

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Karen Trapanick

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Sebastian Alamin

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Joseph Foley III

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Daniel Brindisi

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

CJ Castelletti

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Mark Pizur

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Kristina Gee

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

David Riley

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Benjamin McMonagle

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Jason Stevener

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Erica Shaw

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? 3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Robert Williams

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Kelly Nugent

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Amanda Hopson

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

FAITH Burke

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Jan Mathis

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Ted Wegrzyn jr

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Lorraine Eady

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Paulene Santino

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? 3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Judith Chaffee

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Stephen Surace

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Vincent Perrotta

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Erin Donato

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Rebeka Hartman

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Shannon Laurer

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Marc Klein

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Eric Schaefer

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? 2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Marta Szumski

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Elizabeth Altieri

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Tamara Kerr

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Michael Klein sr

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Devan Cornish

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? 3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Seth Charatz

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Erika Allison

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Jakob Rothfuss

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Kaitlin Coco

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

John Callahan

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Samantha walker

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Sean Meagher

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Ashley Audin

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Heather Hallett

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Mark Ferraro

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Shawn Hamill

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? 3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

David Trimer

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Donna Dye

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Deanna & Randy Feidler

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Liam Mead

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Tom Boggs

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?

11. Who will be monitoring and enforcing the limitations on any permit granted? What will the consequences be if there is a violation? Is there an individual or entity with substance (as opposed to a shell entity) or a bond that is capable of paying for damages to the community and its residents if the permits are violated or damage occurs? We have heard that there is a general lack of oversight and enforcement of land use in the White Lake area (e.g., there are other mines, timber cutting, and granite removal from the Quarry, occurring outside the scope of or without permits).

12. How is mining consistent with the residential use of the community surrounding White Lake? How could the mining operations at the Quarry affect the quality of life for the residents and visitors to the Community?

13. How could the mining operations impact the natural monument dedicated to Putt, a soldier that fought in the Revolutionary War?

I understand one of the local associations is hiring an independent attorney and expert to review the applications and the overall situation. I request that no further action be taken on granting licenses or permits for the Quarry until that review is complete so the impact and risks to the community can be known to all.

Sincerely,

Roxanne Willoughby

PETITION OF CONCERN REGARDING THE WHITE LAKE GRANITE QUARRY

I have an interest in the White Lake area and community. I, along with many others, am very concerned about mining being permitted off of Stone Quarry Road, Town of Forestport, NY (the "**Quarry**"). We want an independent review of the applications regarding proposed mining at the Quarry and the overall situation before any permits, licenses or rights are granted. Concerns include the following:

1. How could mining (including blasting) impact White Lake (e.g., water levels, quality, flow, springs, outlets, etc.)?

2. How could the mining impact the surrounding wetlands (which are essential to the community and the overall environment)? It is our understanding that a federally designated wet land overlaps the parcel that contains the Quarry.

3. Why is there no fully completed and signed Environmental Assessment form? Why is there no Full Environmental Impact Statement? Where are the studies that back up the assertions in the application on noise, impact on water (ground, acquirers and otherwise (proposed to blast within 10' feet of the water table)), traffic and others.

4. What type of noise will be generated from the operations at the Quarry, including the blasting? How often will the blasting occur? Will there be ongoing monitoring of noise levels, shock waves, other potential impacts on the environment and community? How will hikers, hunters and adjoining land owners be notified and protected from the blasting?

5. How could the mining operations at the Quarry impact wildlife in the area?

6. There are homes located on the back side of the granite ridge that is part of the Quarry, how could they be impacted by blasting and other mining operations?

7. Will there be any hazardous waste used or generated in connection with the mining operations?

8. How could the mining impact property values in the Community? Each of these properties represent in many cases a significant asset of the property owners, whether the properties are their full-time residences of seasonal homes.

9. Will the assessed value of the Quarry be increased to reflect the value of the property if mining is approved, thereby making an appropriate contribution to the Town of Forestport?

10. The entrance from RT 28 to Stony Quarry Road is on a curve where the speed limit is 55 MPH. How could the mining operations (e.g., large vehicles hauling granite) impact traffic, increase accidents and risks to residents and others passing through the community?
