Visitor-Use Management of Adirondack Forest Preserve

July 14, 2022

Kevin Prickett – APA

Josh Clague – DEC

John Schmid – DEC

Introduction and Background

Today's Updates:

1. ADK VUM Guidance
2. VUM Contract for High Peaks and Catskills
3. Desired Conditions and Standards
4. Monitoring Protocols
5. Project Spotlight: Ecological Scorecard

Visitor-Use Management of Adirondack Forest Preserve

Guidance Team Members:

Karyn Richards, DEC

Josh Clague, DEC

Rick Weber, APA

Walt Linck, APA

Kevin Prickett, APA

**Adirondack
Park Agency**

**Department of
Environmental
Conservation**

Background

“...an assessment of the physical, biological, and social carrying capacity...with particular attention to portions (of land) ...threatened by overuse in light of its resource limitations and its classification under the master plan.”

- APSLMP, 1972-present

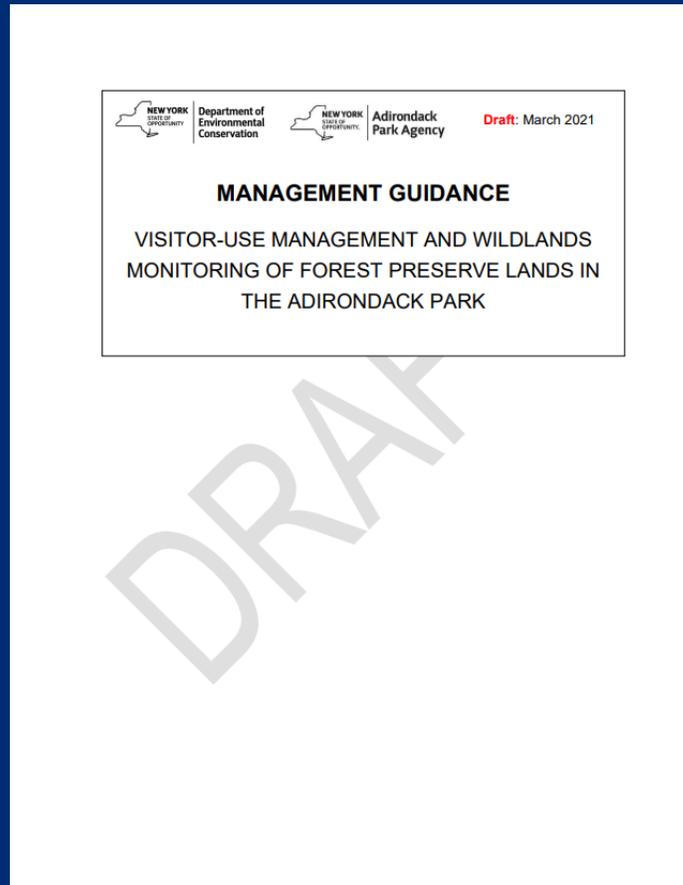

History of the Issue

- **"Carrying capacity" and "limits of acceptable change"** have taken time to develop.
- 2015 - Boreas Ponds tract acquisition concluded multi-phased Finch-Pruyn deal
- 2018 - classification of tract, followed by UMP Amendments
- Interagency Visitor Use Management Council

History of the Issue - continued

- Unprecedented use in the High Peaks over last 5 years
- Parallel effort at Federal level has led to a Visitor Use Management Framework ("VUM") for Federal lands
- 2018 - APA/DEC staff team assigned to formalize concepts from UMP into a guidance document.

NYS DEC Visitor-Use Management Workbook

Next Steps

This field season...

- Hardware (tablet) and software development and deployment
- Pilot projects
- Improving workbook based on lessons learned (both broad and specific)
- Further developing monitoring protocols, including field testing process and equipment

Next winter to check in again...

Next Steps

Seeking input...

- DEC and APA Staff welcome comments from the public to improve the guidance.
- This is not a formal public comment period with time limits.
- Comments should be directed to:
SLMP_Comments@apa.ny.gov

Public Comments

1. Process
2. Holistic Planning
3. Stakeholder Involvement
4. Engage Outside Expertise
5. Waterbody Carrying Capacity
6. Ongoing Monitoring

**Adirondack
Park Agency**

**Department of
Environmental
Conservation**

Project Planning

**Adirondack
Park Agency**

**Department of
Environmental
Conservation**

Name: Adirondack Visitor Use Management (AVUM)

Timeline: October 2021 – October 2024

Goal: To develop a system to assist with visitor use management on the Adirondack Forest Preserve as part of sustaining resources and ensuring quality visitor experiences.

Why:

- APSLMP
- Increase in impacts to resources and experiences
- Visitor Use Management Framework (VUMF) developed by the Interagency Visitor Use Management Council

**Adirondack
Park Agency**

**Department of
Environmental
Conservation**

Opportunities:

- Team approach
- Framework on managing visitor use
- Monitoring software
- Desired conditions

**Adirondack
Park Agency**

**Department of
Environmental
Conservation**

Out of Scope:

- Non-Forest Preserve visitor use problems
- Amendments to the APSLMP
- Purchasing equipment
- Hiring new staff
- Organizational culture change

**Adirondack
Park Agency**

**Department of
Environmental
Conservation**

Deliverables (key elements needed to be success in achieving the project goals):

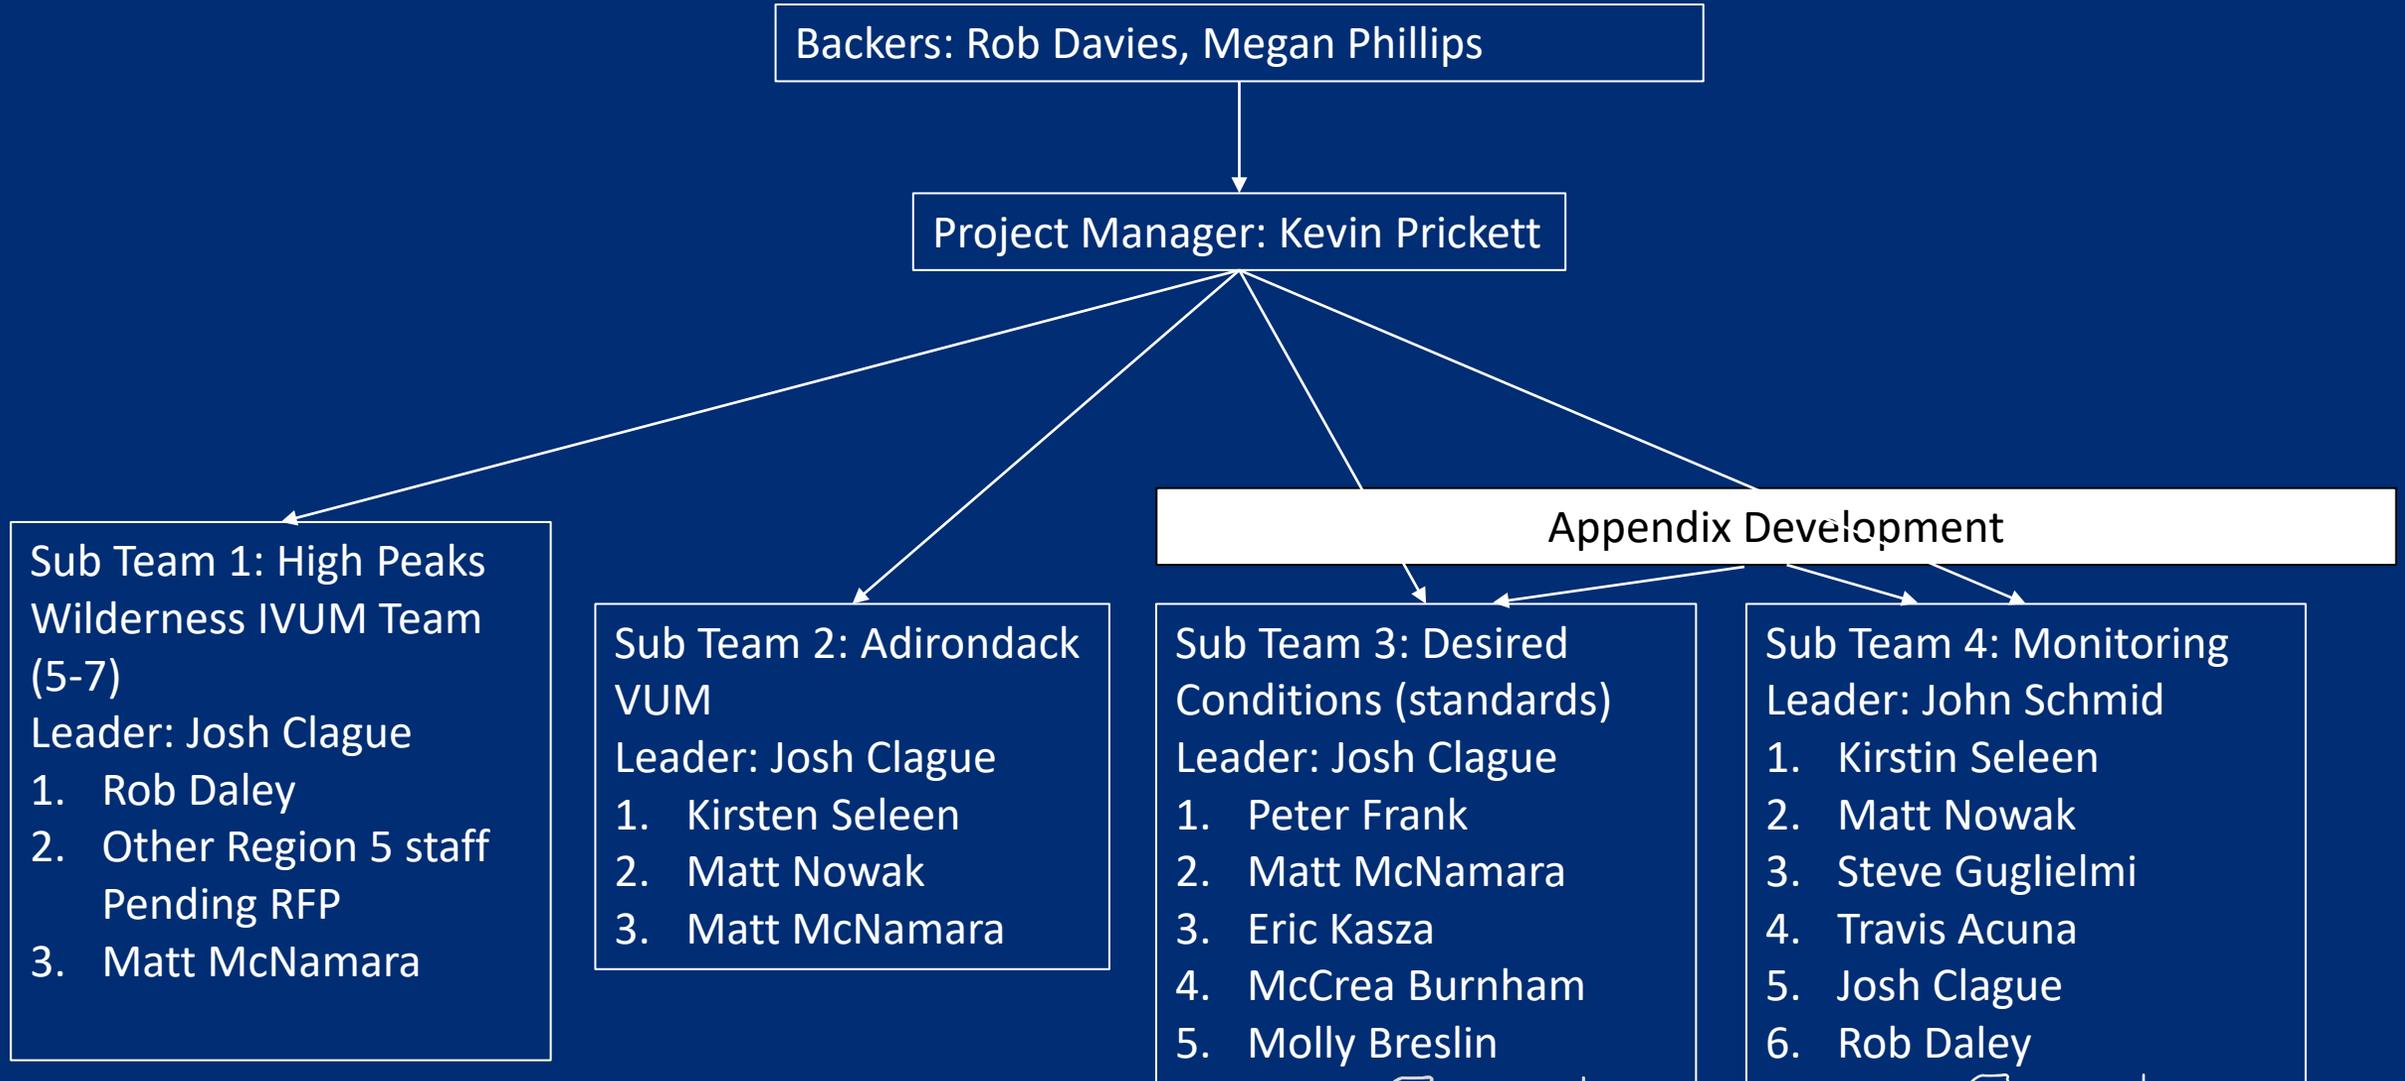

- Visitor use management plan for the High Peaks Wilderness utilizing Federal VUM
- Adirondack framework for managing visitor use
- Monitoring protocols and software
- Desired conditions, including indicators and thresholds

**Adirondack
Park Agency**

**Department of
Environmental
Conservation**

**Adirondack
Park Agency**

Monitoring Protocols

**Adirondack
Park Agency**

**Department of
Environmental
Conservation**

Monitoring Protocols

- Primitive Tent Site Conditions
- Trail Conditions
- Visitor Use Estimation
- Visitor Experience
- Ecological Health

Adirondack
Park Agency

Department of
Environmental
Conservation

Monitoring Protocols

- Primitive Tent Site Conditions
 - Trail Conditions
 - Visitor Use Estimation
 - Visitor Experience
 - Ecological Health
- Physical**
- Social**
- Biological**
-

Management of visitors

- building a foundation;
- defining management direction (i.e. desired conditions, appropriate visitor activities, facilities and services; and indicators and thresholds);
- identifying management strategies (i.e. documenting the differences between existing and desired conditions, identifying strategies to achieve desired conditions and developing monitoring), and
- implementing, monitoring, evaluating and adjusting.

**Adirondack
Park Agency**

**Department of
Environmental
Conservation**

Managing Carrying Capacity

Indicators and standards of quality

Monitoring and management

**Adirondack
Park Agency**

**Department of
Environmental
Conservation**

What is Monitoring?

- (1) selection of indicators, along with establishment of thresholds or objectives, and any needed triggers;
- (2) routine, systematic observations or data collection of the indicators over time; and
- (3) documentation and analysis of the observations or data in relation to the thresholds, triggers, or objectives

**Adirondack
Park Agency**

**Department of
Environmental
Conservation**

Indicators Thresholds

Indicator: Percentage of vegetation cover

Standard: 50% vegetation cover

MANAGEMENT GUIDANCE

SITING, CONSTRUCTION AND MAINTENANCE OF PRIMITIVE TENT SITES IN WILDERNESS, PRIMITIVE, CANOE AND WILD FOREST AREAS ON FOREST PRESERVE LANDS IN THE ADIRONDACK PARK

Primitive Tent Site Location

Primitive Tent Site locations are chosen for the enjoyment of the visitor and protection of natural resources.

Primitive Tent Sites shall be out of sight and sound and generally $\frac{1}{4}$ mile from any other Primitive Tent Site or lean-to. Where severe constraints prevent attainment of the guideline for separation of generally $\frac{1}{4}$ mile lesser separation may be considered through the UMP process on site by site basis.

Environmental
Conservation

Primitive Tent Site Size Limits

Camping at Primitive Tent Sites may have social and ecological impacts. With respect to ecological impacts, trees can be compromised through root exposure, cutting limbs and maiming of trunks. Vegetation may be decreased, and species composition could be changed. Compacted soils might limit the health and vigor of plants and prevent them from growing. Camping also can have aesthetic impacts, including decreasing screening between sites and shade, and diminishing the wild and undeveloped character of the area

With respect to the size limit for a designated Primitive Tent Site, they will provide space for not more than three tents and will not exceed 1,200 square feet in size for each site. 1200 square feet is a measurement of the ground surface area exhibiting impacts from visitor use of the campsite as measured with the Primitive Tent Site monitoring methodology.

Primitive Tent Site Monitoring Manual

Planning

Inventories can be conducted in a single field season or can be done over several seasons.

Primitive tent site monitoring must be completed when green leafy vegetation on non-woody plants is present (e.g. ferns, herbaceous plants). Recommended dates for primitive tent site assessments are after June 1 and before October 1. The assessment can be completed in any kind of weather; however, data entry using a touch pad in rainy conditions is difficult.

The time to complete each assessment depends on several different factors, including: experience, organization and staff. An experienced person or a pair of a people who have completed numerous assessments can complete an assessment within 10-15 minutes. If you have limited experience with assessing tent sites, it is best to utilize two people to work through the assessment steps together.

Day Before Field Visit

Preparation

Identify the locations of the campsites that require an assessment and develop a plan to visit these sites, for example: put together driving directions, print a map of the area, and check the weather conditions for the date of the site visit. In addition, organize the field visit logistics, for example: sign out a vehicle, put together a backpack of personal equipment (e.g. rain gear) needed to be in the field, and identify which trailhead you will park at or which trail will you use.

Hardware preparation

Prior to the beginning of field work, obtain the following:

- Smart phone or tablet - The following are a few preferred alternatives: Samsung Galaxy Tab A 10.1, Samsung Galaxy S6 or a Samsung Galaxy Tab S2.
- Range Finder - The following are a few preferred alternatives: TruPulse 200 or TruPulse 360.
- Range Finder User's Manual

Recording Distance of Flagged Boundaries

- Once the boundaries are flagged, record the distances from the reference cone to the tent site boundary into Survey123 using the following process:
- Person 1 stands at the cone.
- Person 2 stands at the zero flag with shoulder facing person 1. Person 2's shoulder should be on the same plane as the flag.
- Person 1 uses the range finder to measure the distance. If you are using the range finder to determine distance, use the HD mode (horizontal distance mode).
- Person 1 should target person 2 standing at the flagged boundary. Use the cross hairs in the range finder and target person 2's shoulder. It is not a good idea to shoot the range finder into a person's eyes.
- Using Survey123, person 2 records the distance to the campsite boundary at zero degrees as identified by person 1
- Work in a clockwise fashion measuring and recording the campsite boundary distances into Survey123. Round distances to the nearest half foot increments (e.g. enter 12.5 for a length of 12 feet 4 inches or 13 for a length of 13 foot 2 inches).
- If a large feature such as a tree or boulder prevents you from using one of the provided azimuths, adjust the azimuth so that the distance from the reference point to the campsite boundary is uninterrupted. Note the change in azimuth in the notes section at the end of the survey.

Tent Site Assessment 8_17_2020

⊞

Categorize the level of vegetative screening from the water as one of the following classes. From a boat in the water, if the tent site were occupied, would it be visible from the water? *

None-If occupied, campsite is completely visible from water

Partial-If occupied, campsite is partially visible from water.

Complete-If occupied, campsite is not visible from water.

Not applicable-Site is not within two hundred feet of the shoreline.

Is there an access trail from the tent site to the water ? *

Yes, there is an access trail from the water to the tent site.

No, there is not an access trail from the water to the tent site.

Select the number of access trails from the water to the tent site. *

DEC Field Data Collection

- Ambition: from independent (office or individual) field data collection to an augmented centralized, standardized, and accessible GIS system
- DEC and Office of Information Technology Services (ITS) - New Hardware - iPads
- Developing mobile device field forms: parking lot surveys, informal trails, and trail conditions (and Kevin's primitive tent site form)
- Still developing a workflow: desktop and field forms to central database
- Large back-end database with customizable/queryable deliverables

**Adirondack
Park Agency**

Trail Condition Draft Field Form

- Monitoring is kind of step 2 - we need a baseline first
- Developed Draft Trail Condition Survey Form (Survey123)
- Collect a GPS point at a location along a trail with problem/issue/concerns
- Standards and desired conditions still in the works
- Intend to integrate VUM and other classification schema: spot locations, trail segments, and entire trails
